Besides the San Jacinto project, Barajas also is representing Gas Natural Fenosa in its development of wind farm in Baja, California and the negotiation of a cross-border power purchase agreement with a California electric utility for the sale of all the power generated by the facility. The project is the largest U.S.-Mexico cross border wind facility that has secured a power purchase agreement to date.

Barajas’ West Coast practice has set the stage for many of his projects, he said. “The California market is probably by far the most enticing to developers, and a lot of foreign jurisdictions are looking to the U.S. and trying to gain some lessons, because they’ve seen such a quick development of the renewable energy sector,” Barajas said. “Things working here are being studied and adopted. It’s the perfect training ground, because it’s given me a leg up as I’m dealing with the same issues in Latin America.”

Other recent matters Barajas has been involved in:

- First Wind Energy LLC’s $376 million financing of the Milford I wind farm project in Utah, the largest construction financing ever of an individual wind farm in the U.S.
- Represented Royal Bank of Trinidad and Tobago Merchant Bank Limited in the $52 million financing of the Atezaco Hydroelectric Power Project in Mexico
- Represented Mesoamerica Energy in developing a wind farm in Honduras, which will be Central America’s largest wind farm
